

“An evaluation of the efficacy of Cutimed Sorbact® in different types of non-healing wounds.” (Hampton)

- **Objective:** Assess the effectiveness and cost effectiveness of Sorbact® in 21 patients with non-healing wounds.
- **Results:** >60% of non-healing wounds progressed towards healing; 29% healed or almost healed by Day 28, all wounds had reduction in exudate and were eliminated of extreme odor, improved the condition of the peri-wound area in 30% of wounds.
- **Conclusion:** Sorbact® is a suitable alternative to other available antimicrobials such as silver but without the issues of cost and bacterial resistance.
