

“An investigation of Cutimed Sorbact® as an antimicrobial alternative in wound management.” (Kammerlander)

- **Objective:** To assess the efficacy of Sorbact® in the management of chronic wounds.
- **Methods:** A 116-patient multi-centre study was used. 84% of wounds were classified as infected.
- **Results:**
 - 81% of patients with an infected wound improved.
 - 21% of patients’ wounds healed during the study.
 - 72% of patients showed an improvement in wound healing.
 - Reductions in wound pain were reported.
 - Patients and healthcare professionals reported the dressing as being easy to use.
