

“Efficacy of Dialkylcarbamoylchloride-Coated Dressing in Management of Colonized or Infected Neonatal and Pediatric Wounds” (Boyar)

- **Objective:** Case series to assess the effectiveness of using Sorbact® on two neonates and one 10-year-old girl with delayed wound healing (a colonized, unstageable occipital pressure injuries, an infected stage 4 pressure injury over a vertebra, and a dehisced surgical sternal wound).
- **Results:**
 - Complete closure was achieved in all wounds within 2 to 4 weeks.
 - No cytotoxicity or inflammatory responses noted.
