

"Evidence is building to support using a DACC-coated antimicrobial wound contact layer with NPWT." (Bateman)

- **Objective:** Assess the ability of Sorbact® and NPWT to promote wound healing on wounds who had stagnated with just NPWT.
- **Methods:** Case series examining 10 patients with exuding, infected wounds.
- **Results:**
 - Exudate reduction in all patients.
 - Negative microbiology was achieved in all patients by week 2.
 - 44% reduction in NPWT duration allowing discharge of NPWT and continuation with conventional wound dressings.
