

“Hydrogel-impregnated dressings for graft fixation: a case series.” (Choi)

- **Objective:** Infection is the second most common cause of graft loss after skin grafting. This case series used Sorbact® gel + cover dressing to treat 7 patients s/p skin graft. Dressing was opened 5 days after treatment.
- **Results:** No infections were seen and the method was effective regardless of wound size, the thickness of the skin harvested and condition of the defect.
- **Conclusion:** Sorbact® gel provides antibacterial and moisturizing effects not seen with a petrolatum or paraffin gauze.
